1. PREFACE

1.1 WELCOME

As a new owner of Chipkin Automation Systems'™ (CAS) Gateway you have joined thousands of satisfied customers who use Chipkin's protocol gateways, data clients and integration services to meet their building and industrial automation requirements. Our configuration expertise in this field combined with free BACnet and other tools ensure your success; and our customer support via phone, email and remote desktop tools means that we're there when you need us. Thank you for choosing Chipkin's products.

1.2 CHIPKIN

Chipkin offers expert solutions for your building and industrial automation requirements. We develop, configure, install and support gateways (protocol converters), data loggers, and remote monitor and controlling applications. Founded in October 2000, Chipkin provides expert solutions for converting BACnet®, Modbus®, and Lonworks®—to name just a few—and enabling interfaces for HVAC, fire, siren, intercom, lighting, transportation and fuel systems. The high-quality products we offer (including those from other vendors) interface with Simplex™, Notifier™, McQuay™, GE™ and many others—so you can rest assured that Chipkin will select the most appropriate solution for your application.

1.3 SAFETY WARNINGS

The CAS Gateway User Manual provides information on how to install and configure the gateway and is intended for engineers, project management consultants and building management services. Before you install the device, please observe the safety warnings described in in this manual.

1.4 CUSTOMER SUPPORT

Chipkin is a small responsive company, and we live or die by the quality of our service—and with offices in two time-zones—we can provide support when you need it. For information on sales, service, obtaining documentation or submitting a service request, please call us toll free at 1-866-383-1657. Thanks for choosing Chipkin's protocol gateways, data clients and integration services to meet your building and industrial automation requirements.

2. CONNECTIONS

2.1 NETWORK CONNECTIONS

This block diagram lists common network connections that can monitor and control data from HTTP devices using BACnet IP, Modbus RTU/TCP, etc.

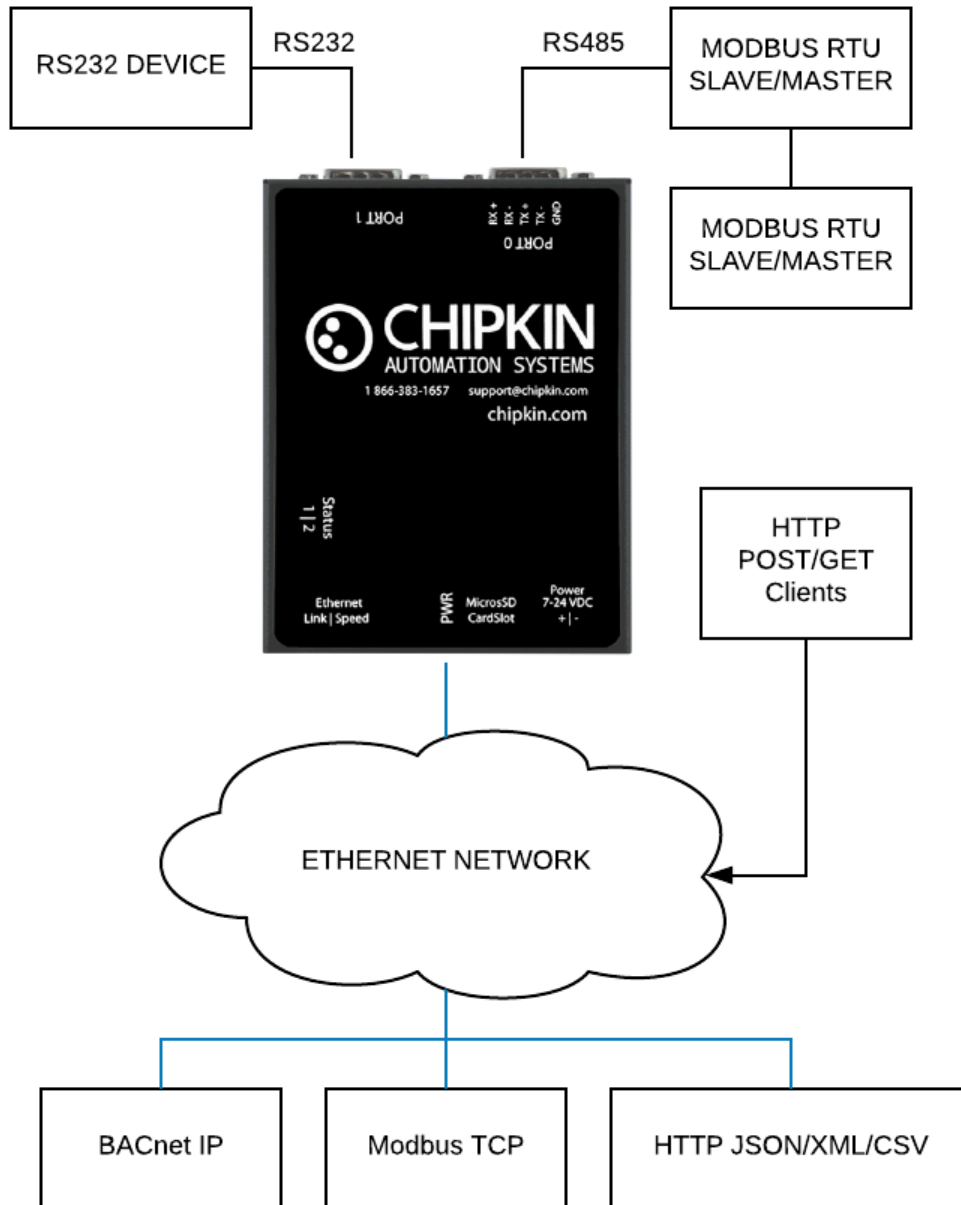

Figure 2.1-1. Network Connections Block Diagram

2.2 COMUNCATION PORTS

The Gateway uses the following ports for communication:

Protocol	Port	Notes
HTTP	TCP 80	Web server.
BACnet IP	UDP 47808	Default port, can be configured.
Modbus TCP	TCP 502	Default port, can be configured.
Syslog	UDP 514	Can be disabled.
FTP	TCP 21	Can be disabled.

Table 2 - Communication ports

3. HTTP Push Configuration

This section contains instructions on how to configure the CAS Gateway CAS-2700 to send data as HTTP Put or HTTP Post payloads. The current driver contains only two options for payloads: Default JSON or Veeder JSON. These will be described in more detail below. If a specific format is required (JSON, XML, or other), please contact Chipkin to discuss.

To access the configuration page, open a web browser and type in the following url:

<http://{ipaddress}/bin/httppush/config>

where {ipaddress} is the IP Address of the CAS Gateway.

Or, from the main system page, click on the following link:

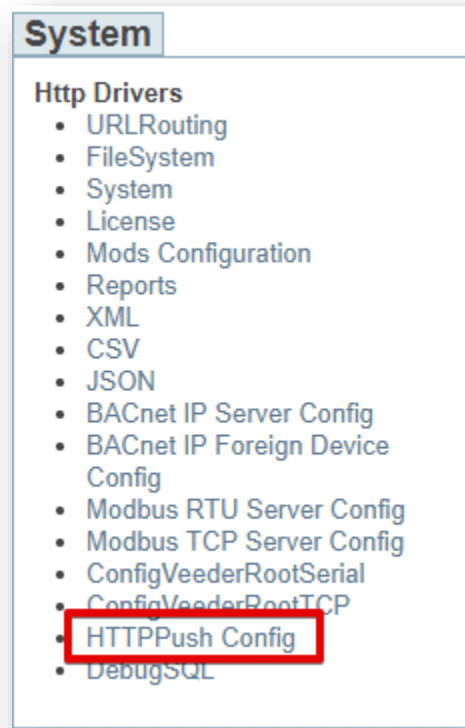

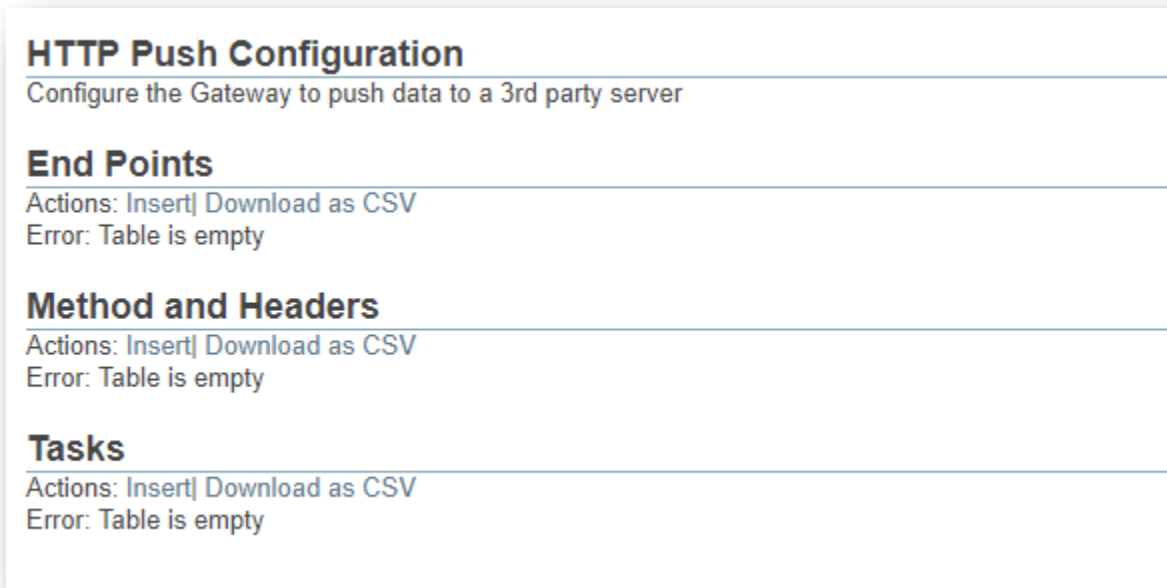

Figure 3-2.2-1 HTTP Push Config Link

You will see the following page:

The screenshot shows a configuration page for HTTP Push. It is divided into four sections, each with a title and a description of actions and errors:

- HTTP Push Configuration**
Configure the Gateway to push data to a 3rd party server
- End Points**
Actions: Insert| Download as CSV
Error: Table is empty
- Method and Headers**
Actions: Insert| Download as CSV
Error: Table is empty
- Tasks**
Actions: Insert| Download as CSV
Error: Table is empty

Figure 3-2.2-2 HTTP Push Config

3.1 End Point Configuration

First add an end point. Click on the End Points “insert” link to add a new end point.

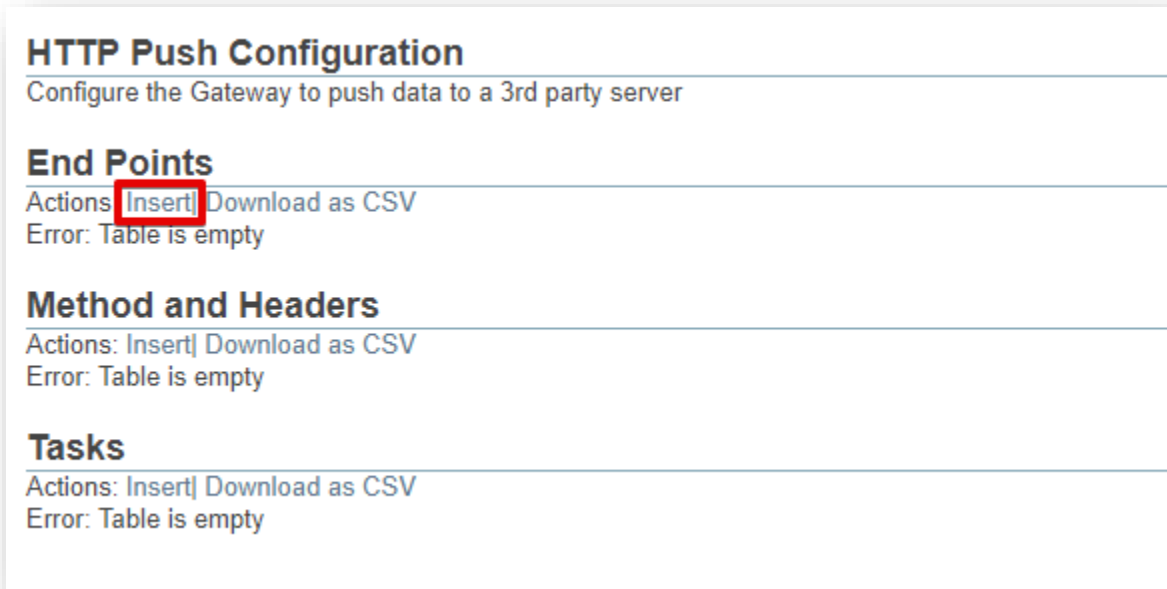

Figure 3.1-1 End Point Insert Link

You will see the following form:

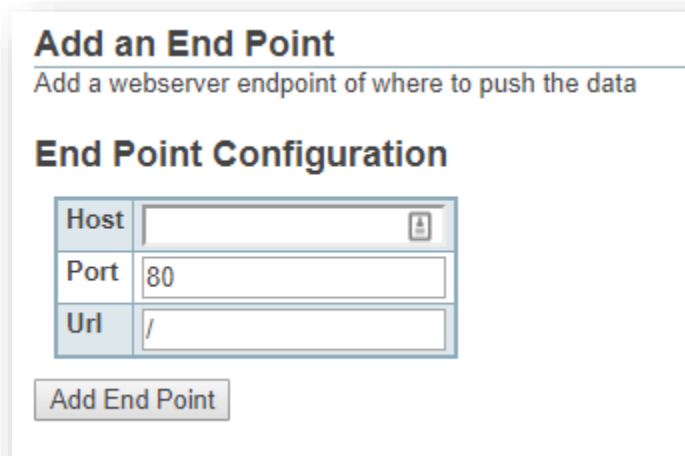

Figure 3.1-2 End Point Form

Fill out the following fields:

- **Host** – The IP Address or Host domain of the server that will receive the data

- **Port** – The port to use when pushing data. Default: 80
- **Url** – The url end point of where to send the data payload.

Once the fields are filled, click the “Add End Point” button. If successful, you will see a new entry on the main configuration page as seen below:

HTTP Push Configuration

Configure the Gateway to push data to a 3rd party server

End Points

Actions: Insert| Download as CSV
 Displaying 30 records from 0-1 of a total 1

action	id	Host	Port	Url
Edit Delete	1	example.com	80	/testData

Method and Headers

Actions: Insert| Download as CSV
 Error: Table is empty

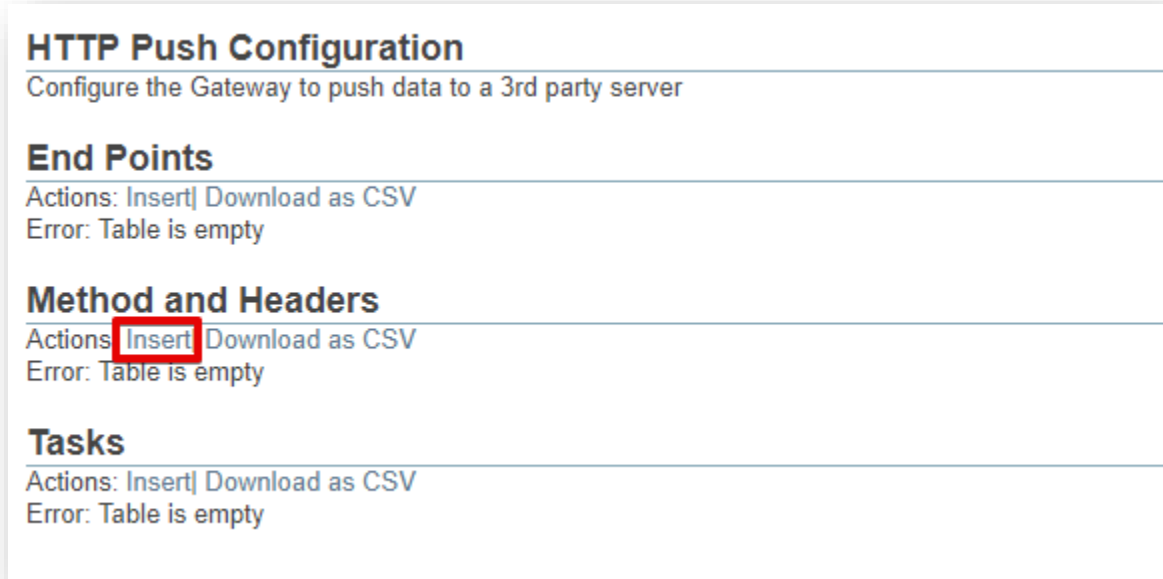

Tasks

Actions: Insert| Download as CSV
 Error: Table is empty

Figure 3.1-3 End Point added successfully

3.2 Method and Headers Configuration

Next, add a method and headers to the end point. Click on the Methods and Headers “insert” link to add a new one.

HTTP Push Configuration
Configure the Gateway to push data to a 3rd party server

End Points
Actions: [Insert](#) | [Download as CSV](#)
Error: Table is empty

Method and Headers
Actions: [Insert](#) | [Download as CSV](#)
Error: Table is empty

Tasks
Actions: [Insert](#) | [Download as CSV](#)
Error: Table is empty

Figure 3.2-1 Method and Headers Insert Link

You will see the following form:

Add Headers and Method to an End Point

Setup the payload method, data pushing method and any headers for sending data to an end point

Select End Point

Select the end point to add the method and headers to.

End Point

example.com/testData ▼

Method Configuration

Data Method Default JSON ▼

HTTP Method PUT ▼

Header Configuration

Add any headers that are required for sending the data. Put each header and value combination on a new line with a comma. Any headers with no values will be skipped. Username and Password have been preset as examples.

Example of header format: "username" : "user1"

```
"Content-Type" : "text/plain",
"username" : "",
"password" : ""
```

Add Method and Headers

Figure 3.2-2 Method and Headers Form

3.2.1 Select End Point

First, select the End Point to use from the drop-down box. This will include a list of all the end points that have been configured.

3.2.2 Method Configuration

Choose the Data and HTTP Methods to use

Data Methods

At the time of the writing of this manual, the HTTP Push driver only supports the following data methods:

- **Default JSON** – uses Chipkin’s default JSON payload
- **VeederRoot JSON** – a specific payload for Veeder Root data

If you require a specific payload (JSON format, XML schema, CSV, etc), please contact Chipkin to discuss your requirements.

HTTP Methods

Select either PUT or POST as the HTTP Method for sending the data payload.

3.2.3 Header Configuration

Add any headers that are required for sending the data payload. These headers are stored as a JSON object and must conform to JSON spec. When adding additional headers, make sure each header is on a new line and that there is a trailing comma where needed.

Please note that all standard HTTP headers will use their specific formatting. For example: Content-Type etc.

For authorization, use username and password headers. Note that these are all lower case:

Here is an example of some headers:

```
"Content-Type" : "application/json",  
"username" : "admin",  
"password" : "12345"
```

If you do not require any additional headers, simply delete any contents and keep the Header Configuration text area empty.

Click on the “Add Method and Headers” button to save the items. If successful, you will see a new entry in the Method and Headers section of the configuration page as seen below:

HTTP Push Configuration

Configure the Gateway to push data to a 3rd party server

End Points

Actions: Insert | Download as CSV

Displaying 30 records from 0-1 of a total 1

action	id	Host	Port	Url
Edit Delete	1	example.com	80	/testData

Method and Headers

Actions: Insert | Download as CSV

Displaying 30 records from 0-1 of a total 1

action	id	Headers	Http Method	Data Method	End Point
Edit Delete	1	{"Content-Type": "application/json", "username": "admin", "password": "12345"}	PUT	Default JSON	example.com/testData

Tasks

Actions: Insert | Download as CSV

Error: Table is empty

Figure 3.2-3 Method and Header added successfully

3.3 Task Configuration

Finally, add tasks that will package the data and send the payload.
 To add a task, click on the Task Configuration “Insert” link as seen below:

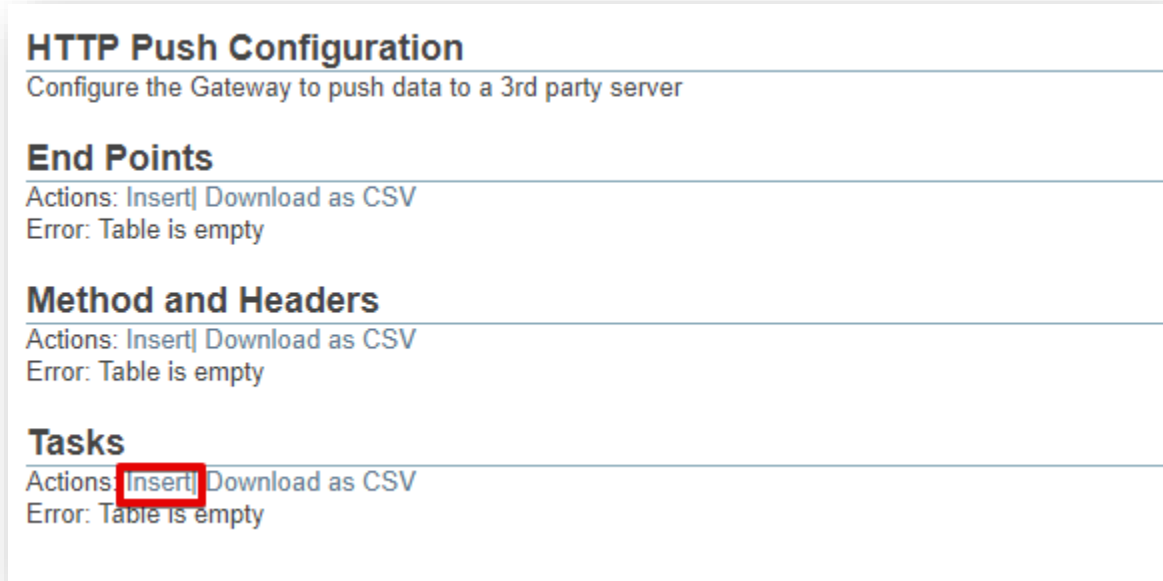

Figure 3.3-1 Tasks Insert Link

Depending on what Data Method was selected in step 3.2, a different form is displayed.

3.3.1 Default JSON

If using the Default JSON data method, you will see the following Task form:

Add a HTTP Push Task

Add task to push data via HTTP

Select End Point and Method

Select the end point and method for this task.

End Point

PUT Default JSON to example.com/testData ▼

Default Task Configuration

Fill out the fields below to determine which data to send

Name	Value	Description
Task Name	<input type="text"/>	The name of this task
Data Table	<input type="text" value="da_data"/>	The table where the data is, default da_data
Data Offset	<input type="text"/>	The data offset of the data in the table
Data Length	<input type="text"/>	The number of data points to push
Frequency	<input type="text"/>	How often in seconds to push the data

Figure 3.3-2 Default JSON Form

First, select the End Point and Method of where to send the data.

Next, fill out the form with the following fields:

- **Task Name** – The name of the task, this is used just for identification.
- **Data Table** – The data table where the data is stored. Default: da_data
- **Data Offset** – The index in the data table of the first data point to use.
- **Data Length** – The number of data points to push.
- **Frequency** – How often in seconds to push the data.

After filling out the fields, click the “Add Task” button to add the task. If successful, you will see the task in the configuration page as seen below:

HTTP Push Configuration

Configure the Gateway to push data to a 3rd party server

End Points

Actions: Insert| Download as CSV

Displaying 30 records from 0-1 of a total 1

action	id	Host	Port	Url
Edit Delete	1	example.com	80	/testData

Method and Headers

Actions: Insert| Download as CSV

Displaying 30 records from 0-1 of a total 1

action	id	Headers	Http Method	Data Method	End Point
Edit Delete	1	{"Content-Type": "application/json","username": "admin","password": "12345"}	PUT	Default JSON	example.com/testData

Tasks

Actions: Insert| Download as CSV

Displaying 30 records from 0-1 of a total 1

action	id	Data Length	Data Offset	Data Table	Method and Endpoint	Task Name	Frequency
Edit Delete	1	10	1	da_data	PUT Default JSON to example.com/testData	Send 1-10	30

Figure 3.3-3 Default JSON Task added successfully

3.3.2 VeederRoot JSON

If using the VeederRoot JSON method you will see the following form:

Add a HTTP Push Task

Add task to push data via HTTP

Select End Point and Method

Select the end point and method for this task.

End Point

POST VeederRoot JSON to example.com/testData ▼

VeederRoot JSON Task Configuration

Select the VeederRoot Tank Data to send to the webserver

Name	Value	Description
Frequency	<input type="text"/>	How often in seconds to push the data

Veeder Root Serial Tasks

	Device
<input type="checkbox"/>	Tank 01
<input type="checkbox"/>	Tank 02

Figure 3.3-4 VeederRoot JSON Form

First, select the End Point and Method of where the data will be pushed.

Next, fill out the Frequency field to specify how often in seconds to push the data.

Finally, select the Veeder Root Tank data to send.

Note: There must be a VeederRoot configuration completed for this method to work.

Once all the fields have been filled and selected, click the “Add Task” button. If successful, you will see new tasks added to the configuration page as seen below:

HTTP Push Configuration

Configure the Gateway to push data to a 3rd party server

End Points

Actions: [Insert](#) | [Download as CSV](#)

Displaying 30 records from 0-1 of a total 1

action	id	Host	Port	Url
Edit Delete	1	example.com	80	/testData

Method and Headers

Actions: [Insert](#) | [Download as CSV](#)

Displaying 30 records from 0-1 of a total 1

action	id	Headers	Http Method	Data Method	End Point
Edit Delete	1	none	POST	VeederRoot JSON	example.com/testData

Tasks

Actions: [Insert](#) | [Download as CSV](#)

Displaying 30 records from 0-2 of a total 2

action	id	Data Length	Data Offset	Data Table	Method and Endpoint	Task Name	Frequency
Edit Delete	1	41	1	da_data	POST VeederRoot JSON to example.com/testData	Tank 01 Data	30
Edit Delete	2	41	101	da_data	POST VeederRoot JSON to example.com/testData	Tank 02 Data	30

Figure 3.3-5 VeederRoot JSON Task added successfully

THANK YOU

Thanks for choosing Chipkin's protocol gateways, data clients and integration services to meet your building and industrial automation requirements!
