1 Description

1.1 *Introduction*

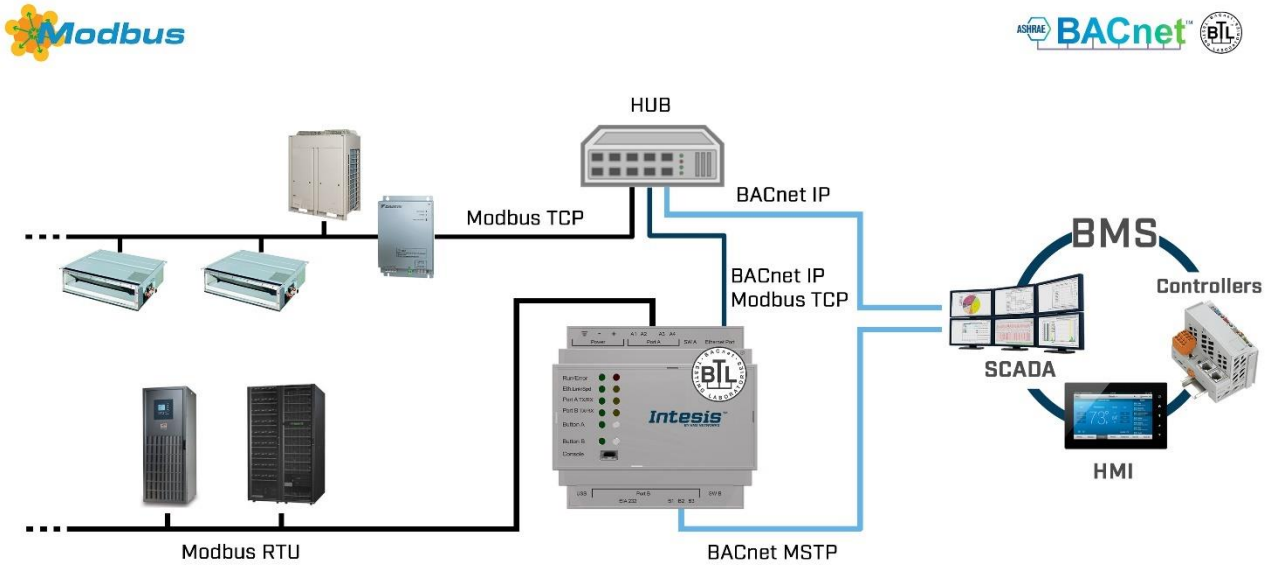
This document describes the integration of Modbus RTU and Modbus TCP installations into BACnet MSTP or BACnet IP compatible devices and systems using the Intesis *BACnet Server – Modbus Client* gateway.

The aim of this integration is to make accessible Modbus system signals and resources from a BACnet based control system or device, as if it was a part of the own BACnet system and vice-versa.

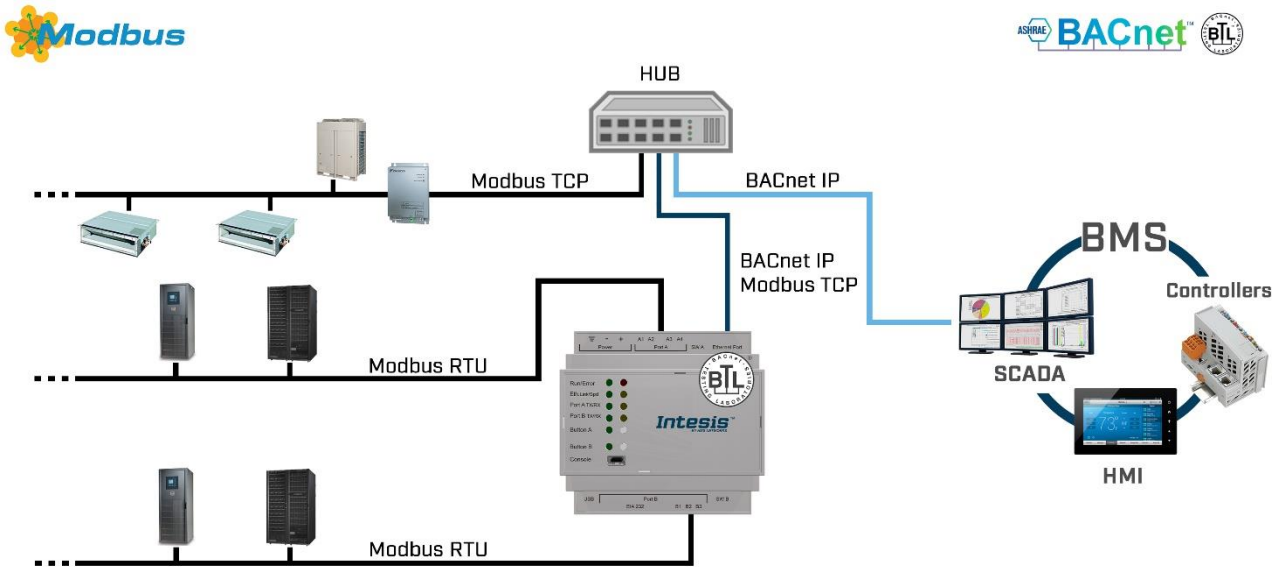
The gateway acts as a BACnet/IP Server or BACnet MSTP device in its BACnet interface, allowing other BACnet devices to perform subscription (COV) requests and reads/writes to its internal points. From the Modbus point of view, Intesis simulates a Modbus RTU Master device and or Modbus TCP Client device. Readings of the Modbus slave device(s) is performed by Intesis by automatic continuous polling.

Configuration is carried out using the configuration software Intesis™ MAPS.

This document assumes that the user is familiar with BACnet and Modbus technologies and their technical terms.



Integration of Modbus RTU Slaves or Modbus TCP Servers to BACnet IP or MSTP control and monitoring systems



Integration of Modbus RTU Slaves or Modbus TCP Servers to BACnet IP control and monitoring systems

1.2 *Functionality*

From the Modbus system point of view, after the start up process, Intesis reads continuously the points configured to be read in the Modbus TCP Server and/or Modbus RTU Slave devices and updates in its memory all the values received from the Modbus system.

There are 2 available ports for Modbus RTU integration. When enabling this functionality in Intesis MAPS, each RS-485 port (Port A and Port B) integrates up to 32 Modbus RTU devices (up to 64 devices in total) without the need of additional repeaters to the network.

This functionality is disabled when BACnet MSTP is selected in Intesis MAPS, leaving only port A available for Modbus RTU connectivity and port B for BACnet MSTP devices.

For more information about product ports and connections please see Section 6. Connections.

The default configuration is Port A: Modbus RTU and Port B: BACnet MSTP.

From the BACnet system point of view, after the start up process, the gateway listens for any subscription (COV) request, serves any polling request, or performs any writing request of its internal points received from the BACnet system. The values received from BACnet are immediately written in the associated register of the corresponding Modbus TCP Server or Modbus RTU Slave device.

All the Modbus registers in the slave devices is associated to a *BACnet object*, with this, all the Modbus system (all the slave devices) is seen as *a single BACnet device with many objects* from the BACnet system point of view, each object corresponding to a Modbus slave/register address.

When a new value is read from Modbus for a given register, the new value is updated in the gateway's memory and, if this signal is associated to a BACnet active subscription then the new value will be sent to the subscripted BACnet device(s).

In the continuous polling of the Modbus devices, if a non-response of the BACnet device is detected, the corresponding virtual signal inside Intesis will be activated indicating communication error with the Modbus device. These virtual signals indicating communication status in real time with the Modbus devices are also accessible from BACnet, like the rest of the points of the gateway.

1.3 *Gateway's capacity*

Intesis capacity is listed below:

Element	100 version	250 version	600 version	1200 version	3000 version	Notes
Type of BACnet devices	IP / MSTP					Communication with BACnet IP and MSTP
Number of BACnet Objecs	100	250	600	1200	3000	Maximum number of points that can be defined in the virtual BACnet device inside the gateway
Number of BACnet Subscriptions (COV) requests	200	500	1200	2400	6000	Maximum number of BACnet subscriptions (COV) requests accepted by the gateway
Type of Modbus slave devices	Modbus RTU (EIA485) Modbus TCP					Those supporting Modbus *protocol*. Communication over TCP/IP and RTU
Number of Modbus Slave devices	Up to 5 Modbus TCP nodes/devices Up to 255 Modbus RTU devices per TCP/RTU node					Number of Modbus Slave devices supported by the device

2 Protocol Implementation Conformance Statement

BACnet Protocol Implementation Conformance Statement (PICS)

Date: *2018-05-16*
Vendor Name: *HMS Industrial Networks S.L.U*
Product Name: *INBACMBM---0000*
Product Model Number: *INBACMBM---0000*
Application Software Version: *1.0.3.0*
Firmware Revision: *14.0.1.0*
BACnet Protocol Revision: *14*

Product Description:

Modbus – BACnet MS/TP & BACnet IP Gateway

Abstraction of Modbus Registers as BACnet Objects.

2.1 *BACnet Standardized Device Profile (Annex L):*

☐ BACnet Operator Workstation (B-OWS)

☐ BACnet Building Controller (B-BC)

☒ BACnet Advanced Application Controller (B-AAC)

☐ BACnet Application Specific Controller (B-ASC)

☐ BACnet Smart Sensor (B-SS)

☐ BACnet Smart Actuator (B-SA)

Additional BACnet Interoperability Building Blocks Supported (Annex K):
Reference of BIBBs List

2.2 *Segmentation Capability:*

Segmented request supported	☐ No	☒ Yes	Window Size *· 16 ·*
Segmented responses supported	☐ No	☒ Yes	Window Size *· 16 ·*

2.3 *Data Link Layer Options:*

☒ BACnet IP, (Annex J)
☒ BACnet IP, (Annex J), Foreign Device
☐ ISO 8802-3, Ethernet (Clause 7)
☐ ANSI/ATA 878.1, 2.5 Mb. ARCNET (Clause 8)
☐ ANSI/ATA 878.1, RS-485 ARCNET (Clause 8), baud rate(s) ____
☒ MS/TP master (Clause 9), baud rate(s): 9600, 19200, 38400, 57600, 76800, 115200
☐ MS/TP slave (Clause 9), baud rate(s):
☐ Point-To-Point, EIA 232 (Clause 10), baud rate(s):
☐ Point-To-Point, modem, (Clause 10), baud rate(s):
☐ LonTalk, (Clause 11), medium: _____
☐ Other:

2.4 *Device Address Binding:*

Is static device binding supported? (This is currently necessary for two-way communication with MS/TP slaves and certain other devices.) ☐ Yes ☒ No

2.5 *Networking Options:*

☐ Router, Clause 6 - List all routing configurations, e.g., ARCNET-Ethernet, Ethernet-MS/TP, etc.
☐ Annex H, BACnet Tunneling Router over IP
☒ BACnet/IP Broadcast Management Device (BBMD)
Does the BBMD support registrations by Foreign Devices? ☒ Yes ☐ No

2.6 *Character Sets Supported*

Indicating support for multiple character sets does not imply that they can all be supported simultaneously.

☒ ISO 10646 (UTF-8)	☐ IBM™/Microsoft™ DBCS	☐ ISO 8859-1
☐ ISO 10646 (UCS-2)	☐ ISO 10646 (UCS-4)	☐ JIS X 0208

2.7 *Gateway*

If this product is a communication gateway, describe the types of non-BACnet equipment/network(s) that the gateway supports:

Modbus RTU (EIA485) and TCP networks.

3 BACnet Interoperability Building Blocks Supported (BIBBs)

3.1 *Data Sharing BIBBs*

BIBB Type		Active	BACnet Service	Initiate	Execute
DS-RP-A	Data Sharing-ReadProperty–A	☐	ReadProperty	☒	☐

EventMessageTexts	BACnetARRAY[3] of CharacterString		O	R*
Profile_Name	CharacterString		O	-
Logging_Type	BACnetLoggingType		R	R
Status_Flags	BACnetStatusFlags		R	R

* Only available when specific object has a Notification Class configured

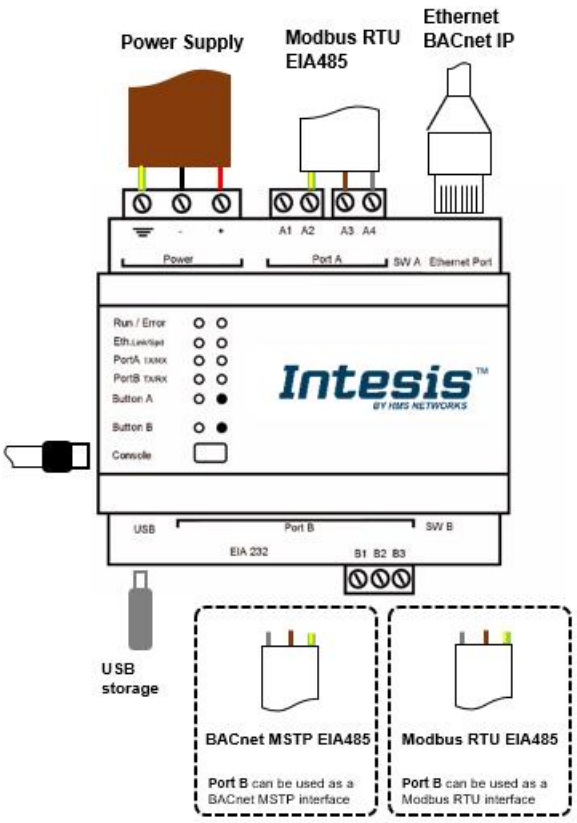
6 Connections

Find below information regarding the Intesis connections available.



Power Supply
Must use NEC Class 2 or Limited Power Source (LPS) and SELV rated power supply.

If using DC power supply:
Respect polarity applied of terminals (+) and (-). Be sure the voltage applied is within the range admitted (check table below). The power supply can be connected to earth but only through the negative terminal, never through the positive terminal.

If using AC power supply:
Make sure the voltage applied is of the value admitted (24 Vac). Do not connect any of the terminals of the AC power supply to earth, and make sure the same power supply is not supplying any other device.

Ethernet / BACnet IP / Modbus TCP
Connect the cable coming from the IP network to the connector ETH of the gateway. Use an Ethernet CAT5 cable. If communicating through the LAN of the building, contact the network administrator and make sure traffic on the port used is allowed through all the LAN path (check the gateway user manual for more information). With factory settings, after powering up the gateway, DHCP will be enabled for 30 seconds. After that time, if no IP is provided by a DHCP server, the default IP 192.168.100.246 will be set.

PortA / Modbus RTU
Connect the EIA485 bus to connectors A3 (A-), A4 (B+) and A1 or A2 (SNGD) of gateway's PortA. Respect the polarity.

PortB / BACnet MSTP / Modbus RTU
Connect the EIA485 bus to connectors B1 (B+), B2 (A-) and B3 (SNGD) of gateway's PortB. Respect the polarity.

Note for PortA and PortB; *Remember the characteristics of the standard EIA485 bus: maximum distance of 1200 meters, maximum 32 devices connected to the bus, and in each end of the bus it must be a termination resistor of 120 Ω. The gateway has an internal bus biasing circuit that incorporates the termination resistor. If you install the gateway in one of the ends of the bus, then do not install an additional termination resistor in that end.*

Console Port
Connect a mini-type B USB cable from your computer to the gateway to allow communication between the Configuration Software and the gateway. Remember that Ethernet connection is also allowed. Check the user manual for more information.

USB
Connect a USB storage device (not a HDD) if required. Check the user manual for more information.

Ensure proper space for all connectors when mounted (see section 10).

6.1 *Powering the device*

A power supply working with any of the voltage range allowed is needed (check section 9). Once connected the RUN led (Figure above) will turn on.

WARNING! In order to avoid earth loops that can damage the gateway and/or any other equipment connected to it, we strongly recommend:

- The use of DC power supplies, floating or with the negative terminal connected to earth. **Never use a DC power supply with the positive terminal connected to earth**.
- The use of AC power supplies only if they are floating and not powering any other device.

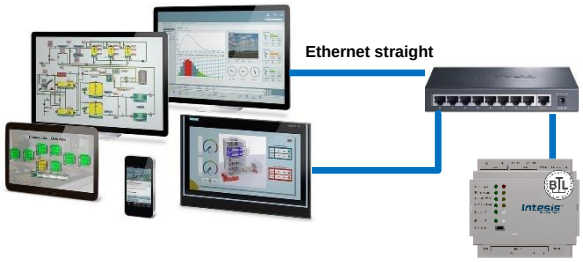
6.2 *Connection to BACnet*

6.2.1 BACnet IP

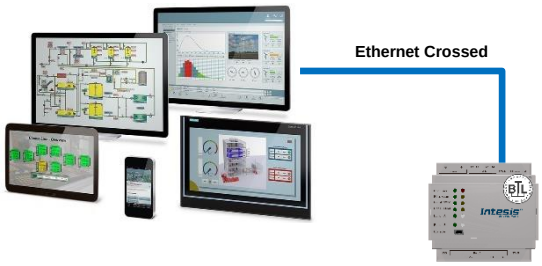
Connect the communication cable coming from the network hub or switch to the ETH port (Figure above) of Intesis. The cable to be used shall be a straight Ethernet UTP/FTP CAT5 cable

In case there is no response from the BACnet devices to the frames sent by Intesis, check that they are operative and reachable from the network connection used by Intesis. Check the Intesis Ethernet interface sending *Pings* to its IP address using a PC connected to the same Ethernet network.

Check as well with the network admin that there are no limitations regarding UDP communication or ports blocked.



BACnet IP connection using switch/hub and straight cable



BACnet IP connection without switch/hub and crossed cable

6.2.2 BACnet MSTP

Connect the EIA485 bus to connectors B1 (B+), B2 (A-) and B3 (SNGD) of gateway's PortB. Respect the polarity.

Remember the characteristics of the standard EIA485 bus: maximum distance of 1200 meters, maximum 32 devices connected to the bus, and in each end of the bus it must be a termination resistor of 120 Ω. The gateway has an internal bus biasing circuit that incorporates the termination resistor. If you install the gateway in one of the ends of the bus, then do not install an additional termination resistor in that end.

Note: BACnet MSTP only available when port B not used for Modbus RTU integration. Selectable by Intesis MAPS.

6.3 *Connection to Modbus*

6.3.1 Modbus TCP

Connect the communication cable coming from the network hub or switch to the ETH port of Intesis. The cable to be used shall be a straight Ethernet UTP/FTP CAT5 cable.

6.3.2 Modbus RTU

Connect the communication cable coming from the Modbus network to the port/s marked as Modbus of Intesis. Connect the EIA485 bus to connectors A3 (A-), A4 (B+) and A1 or A2 (SNGD) of gateway's PortA. Respect the polarity.

If you use Port B as a Modbus RTU port, connect the EIA485 bus to connectors B1 (B+), B2 (A-) and B3 (SNGD) of gateway's PortB. Respect the polarity.

Remember the characteristics of the standard EIA485 bus: maximum distance of 1200 meters, maximum 32 devices connected to the bus, and in each end of the bus it must be a termination resistor of 120 Ω. The gateway has an internal bus biasing circuit that incorporates the termination resistor. If you install the gateway in one of the ends of the bus, then do not install an additional termination resistor in that end.

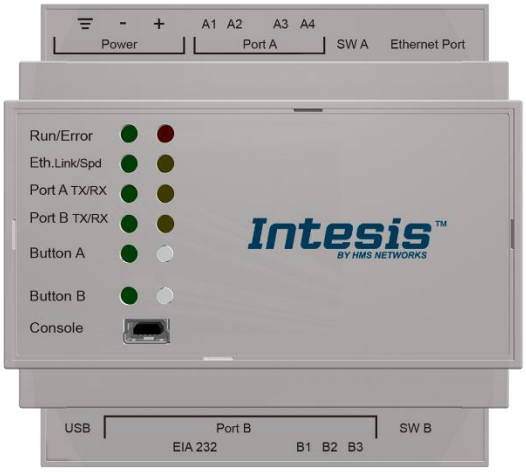
Note: Modbus RTU only available when port B not used for BACnet MSTP integration. Selectable by Intesis MAPS.

6.4 *Connection to the configuration tool*

This action allows the user to have access to configuration and monitoring of the device (more information can be found in the configuration tool User Manual). Two methods to connect to the PC can be used:

- **Ethernet:** Using the Ethernet port of Intesis.
- **USB:** Using the console port of Intesis, connect a USB cable from the console port to the PC.

7 Status LEDs and push buttons



LED	Colour	Indication
Run	Off	No power
	Green	Device powered and working.
Error	Off	No error
	Red	Error
Port A (Tx/Rx) – Modbus RTU	Off	There is no activity on this port.
	Tx - Blinking green	Every data packet sent to the network it blinks
	Rx – Blinking yellow	Every data packet received from a slave device it blinks
Port B (Tx/Rx) – Modbus RTU (Using BACnet/IP protocol)	Off	There is no activity on this port.
	Tx - Blinking green	Every data packet sent to the network it blinks
	Rx – Blinking yellow	Every data packet received from a slave device it blinks
Port B (Tx/Rx) – BACnet (Using BACnet/MSTP protocol)	Off	There is no activity on this port.
	Tx - Blinking green	Every data packet sent to the network it blinks
	Rx – Blinking yellow	Every data packet received from a slave device it blinks
Button A – Modbus RTU	Off / Red	It doen't have any functionality
Button B – Modbus RTU (Using BACnet/IP protocol)	Off / Red	It doen't have any functionality
Button B – BACnet (Using BACnet/MSTP protocol)	Off / Red	On when link is detected: - BACnetIP: ethernet is up & running, the IBOX got an IP - BACnetMSTP: token passing is detected

Push button	Functionality
Button A – Modbus RTU	It doesn't have any functionality. It can be configured from Intesis MAPS software
Button B – Modbus RTU (Using BACnet/IP protocol)	It doesn't have any functionality. It can be configured from Intesis MAPS software
Button B – BACnet (Using BACnet/MSTP protocol)	Sends to Broadcast I-Am message

8 Set-up process and troubleshooting

7.1 *Pre-requisites*

It is necessary to have a BACnet IP client or MSTP device operative and well connected to the corresponding BACnet port of Intesis and a Modbus RTU slave or Modbus TCP client connected to their corresponding ports as well.

Connectors, connection cables, PC to use the configuration tool and other auxiliary material, if needed, are not supplied by HMS Industrial Networks S.L.U for this standard integration.

Items supplied by HMS Networks for this integration are:

- Intesis gateway.
- Link to download the configuration tool.
- USB Console cable to communicate with Intesis.
- Product documentation.

7.2 *Intesis MAPS. Configuration & monitoring tool for Intesis BACnet series*

7.2.1 Introduction

Intesis MAPS is a Windows® compatible software developed specifically to monitor and configure Intesis BACnet series.

The installation procedure and main functions are explained in the *Intesis MAPS User Manual*. This document can be downloaded from the link indicated in the installation sheet supplied with the Intesis device or in the product website at www.intesis.com

In this section, only the specific case of Modbus to BACnet systems will be covered.

Please check the Intesis MAPS user manual for specific information about the different parameters and how to configure them.

7.2.2 Connection

To configure the Intesis connection parameters press on the ***Connection*** button in the *menu bar*.

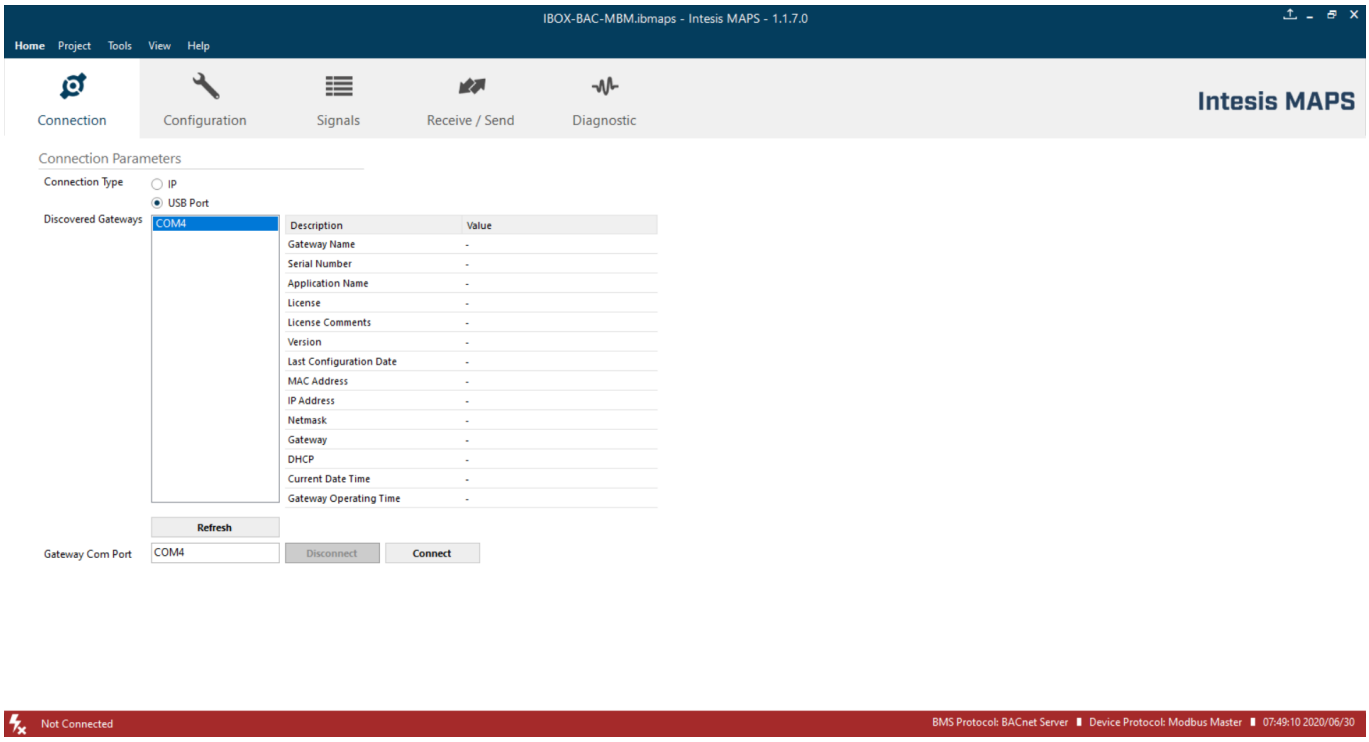


Figure 8.1 MAPS connection

7.2.3 Configuration tab

Select the ***Configuration*** tab to configure the connection parameters. Three subsets of information are shown in this window: General (Gateway general parameters), BACnet Server (BACnet interface configuration) and Modbus Master (Modbus interface parameters).

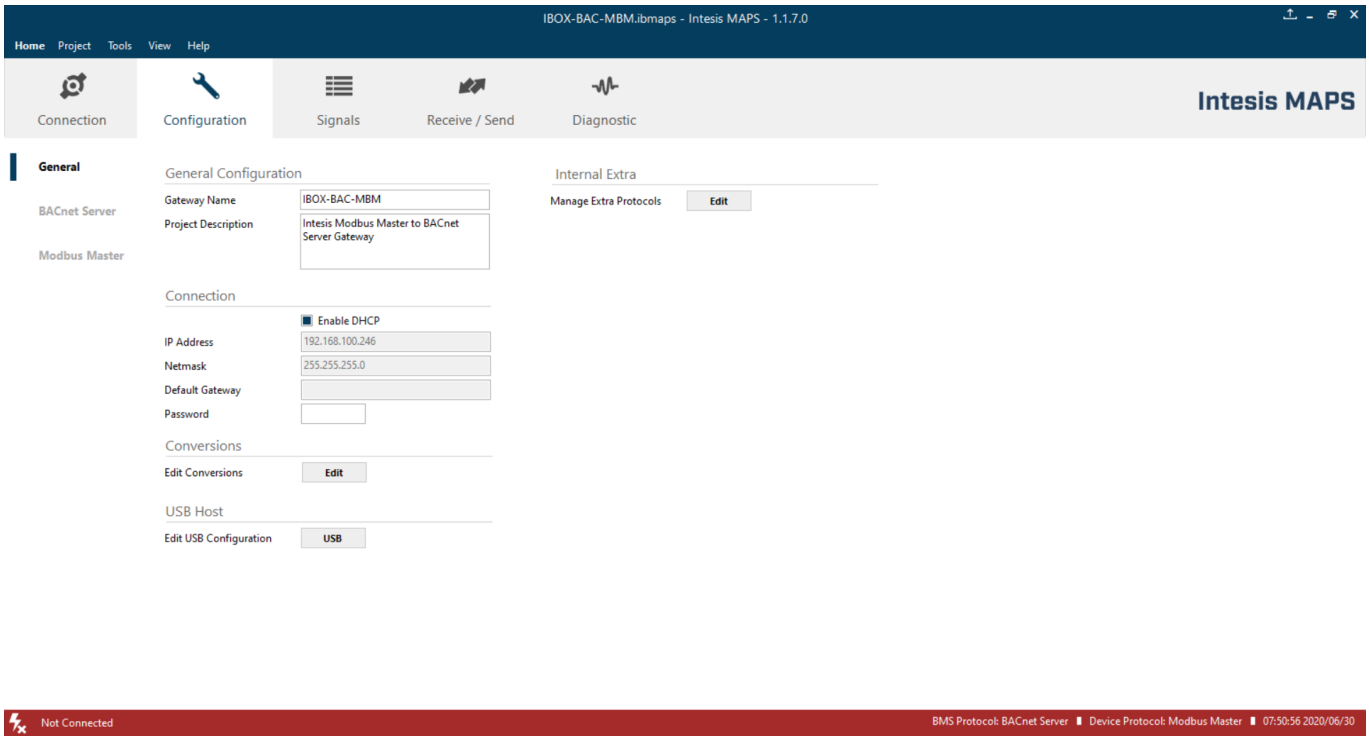

Figure 8.2 Intesis MAPS configuration tab

7.2.4 Signals

All available objects, Object Instances, its corresponding Modbus register and other main parmaters are listed in the signals tab. More information on each parameter and how to configure it can be found in the Intesis MAPS user manual.

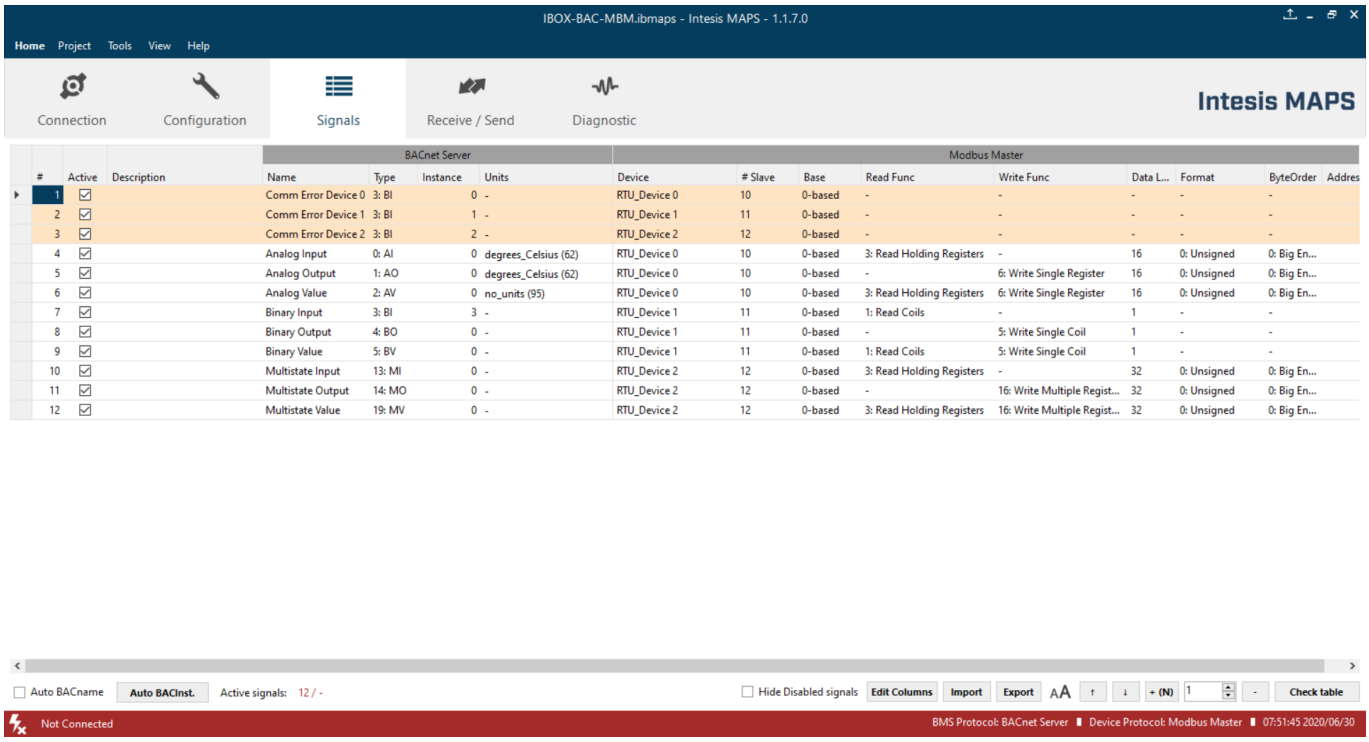

Figure 8.3 Intesis MAPS Signals tab

7.2.5 Sending the configuration to Intesis

When the configuration is finished, follow the next steps.

1.- Click on ***Save*** button to save the project to the project folder on your hard disk (more information in Intesis MAPS User Manual).

2.- You will be prompted to generate the configuration file to be sent to the gateway.

a.- If ***Yes*** is selected, the file containing the configuration for the gateway will be generated and saved also into the project folder.

b.- If ***NO*** is selected, remember that the binary file with the project needs to be generated before the Intesis starts to work as expected.

3.- Press the ***Send File*** button to send the binary file to the Intesis device. The process of file transmission can be monitored in the Intesis Communication Console window. Intesis will reboot automatically once the new configuration is loaded.

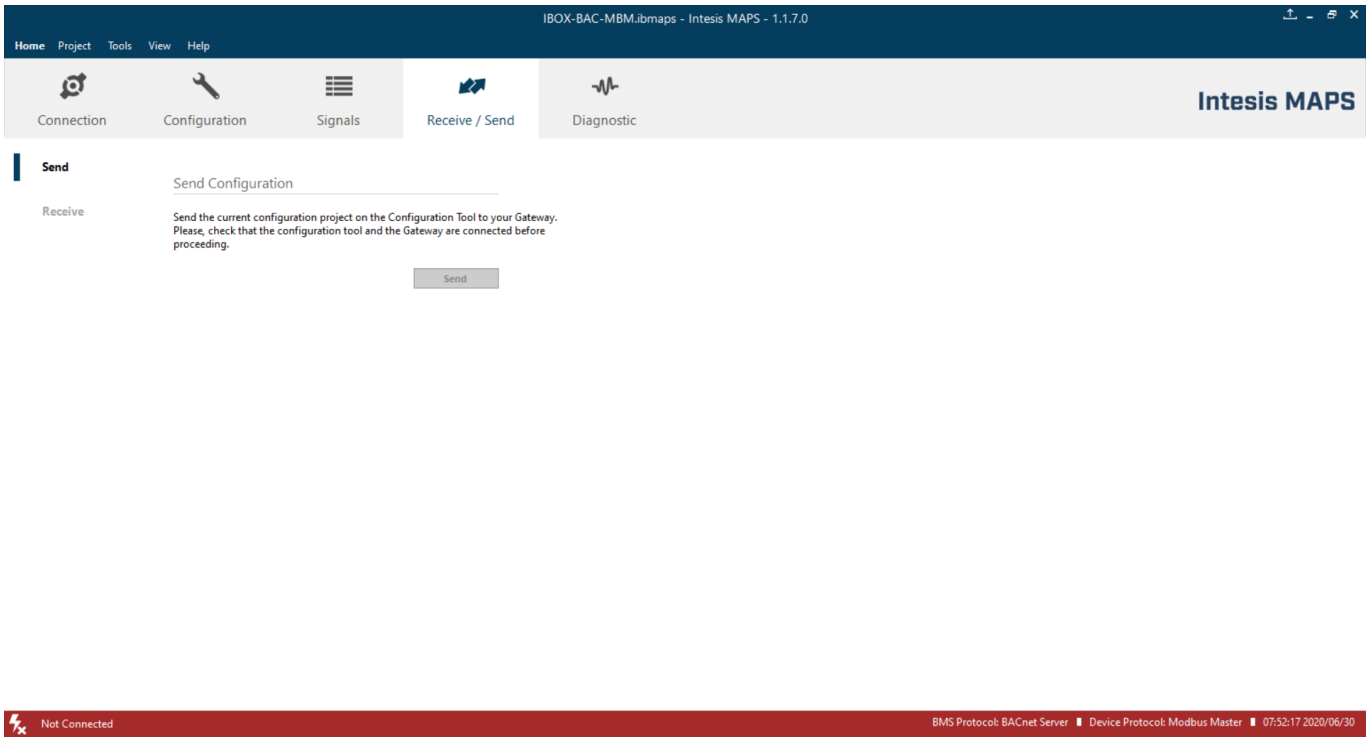

Figure 8.4 Intesis MAPS Receive/Send tab

After any configuration change, do not forget to send the configuration file to the Intesis using button Send File.

7.2.6 Diagnostic

To help integrators in the commissioning tasks and troubleshooting, the Configuration Tool offers some specific tools and viewers.

In order to start using the diagnostic tools, connection with the Gateway is required.

The Diagnostic section is composed by two main parts: Tools and Viewers.

- **Tools**
  Use the tools section to check the current hardware status of the box, log communications into compressed files to be sent to the support, change the Diagnostic panels' view or send commands to the gateway.

- **Viewers**
  In order to check the current status, viewer for the Internal and External protocols are available. It is also available a generic Console viewer for general information about communications and the gateway status and finally a Signals Viewer to simulate the BMS behavior or to check the current values in the system.

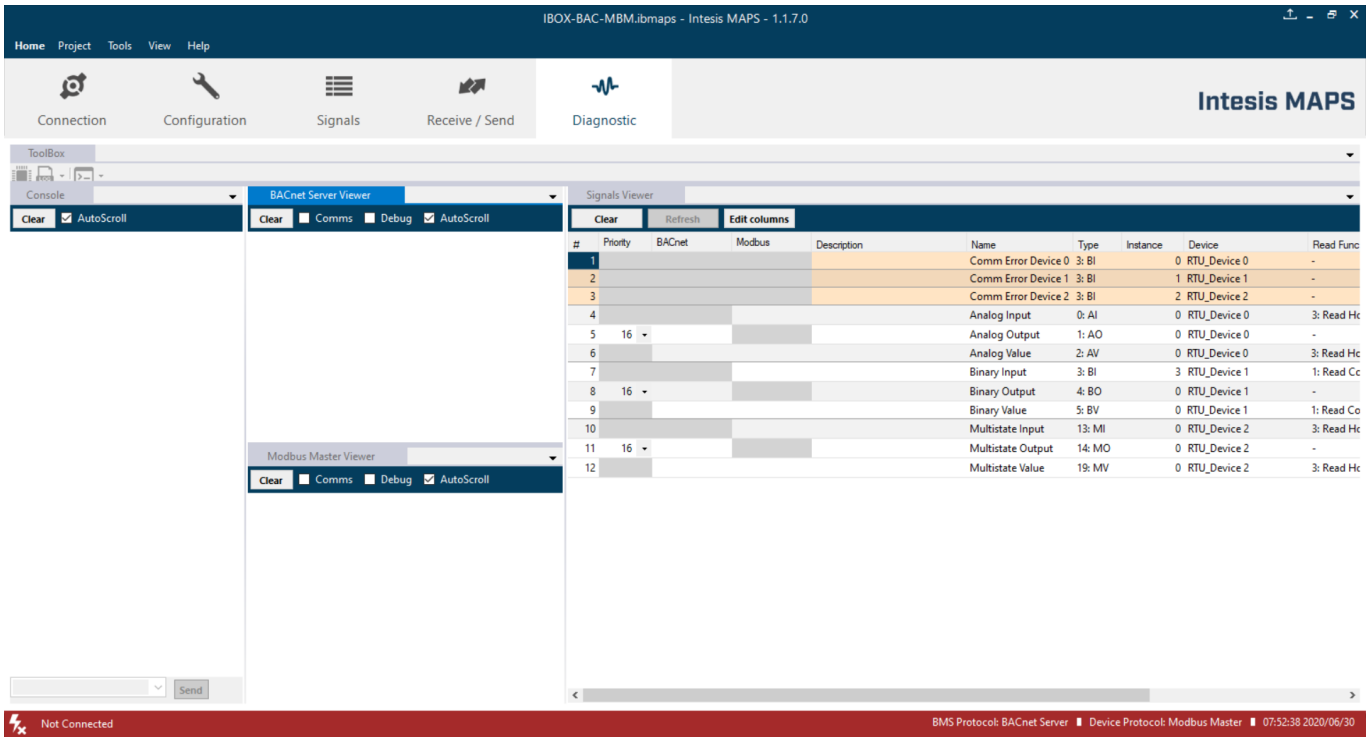

Figure 8.5 Diagnostic

More information about the Diagnostic section can be found in the Configuraion Tool manual.

7.3 *Set-up procedure*

1. Install Intesis MAPS on your laptop, use the setup program supplied for this and follow the instructions given by the Installation wizard.

2. Install Intesis in the desired installation site. Installation can be on DIN rail or on a stable not vibrating surface (DIN rail mounted inside a metallic industrial cabinet connected to ground is recommended).

3. If using BACnet IP, connect the communication cable coming from the BACnet IP network to the port marked as Ethernet on Intesis (More details in section 6).

   If using BACnet MSTP, connect the communication cables coming from the BACnet MSTP network to the port marked as Port B on Intesis. This configuration can be later changed in MAPS configuration (More details in section 6).

4. If using, Modbus RTU, connect the communication cable coming from the EIA485 port of the Modbus RTU installation to the port marked as Port A or B of Intesis. This configuration can be later changed in MAPS configuration (More details in section 6).

   If using, Modbus TCP, connect the communication cable coming from the Ethernet port of the Modbus TCP installation to the port marked as Ethernet of Intesis (More details in section 6).

5. Power up Intesis. The supply voltage can be 9 to 30 Vdc or just 24 Vac. Take care of the polarity of the supply voltage applied.

   WARNING! In order to avoid earth loops that can damage Intesis and/or any other equipment connected to it, we strongly recommend:

   - The use of DC power supplies, floating or with the negative terminal connected to earth. **Never use a DC power supply with the positive terminal connected to earth**.
   - The use of AC power supplies only if they are floating and not powering any other device.

6. If you want to connect using IP, connect the Ethernet cable from the laptop PC to the port marked as Ethernet of Intesis (More details in section 6).

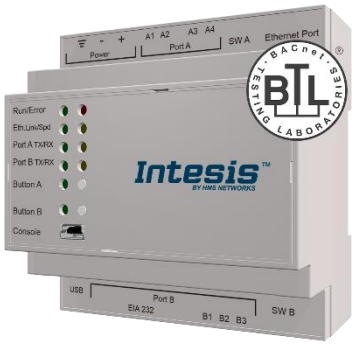
   If you want to connect using USB, connect the USB cable from the laptop PC to the port marked as Console of Intesis (More details in section 6).

7. Open Intesis MAPS, create a new project selecting a copy of the one named **INBACMBM---0000**.

8. Modify the configuration as desired, save it and download the configuration file to Intesis as explained in the Intesis MAPS user manual.

9. Visit the Diagnostic section and check that there is communication activity, some TX frames and some other RX frames. This means that the communication with the BACnet master device and Modbus Slave devices is OK. In case there is no communication activity between Intesis and the BACnet and/or Modbus devices, check that those are operative: check the baud rate, the communication cable used to connect all devices and any other communication parameter.

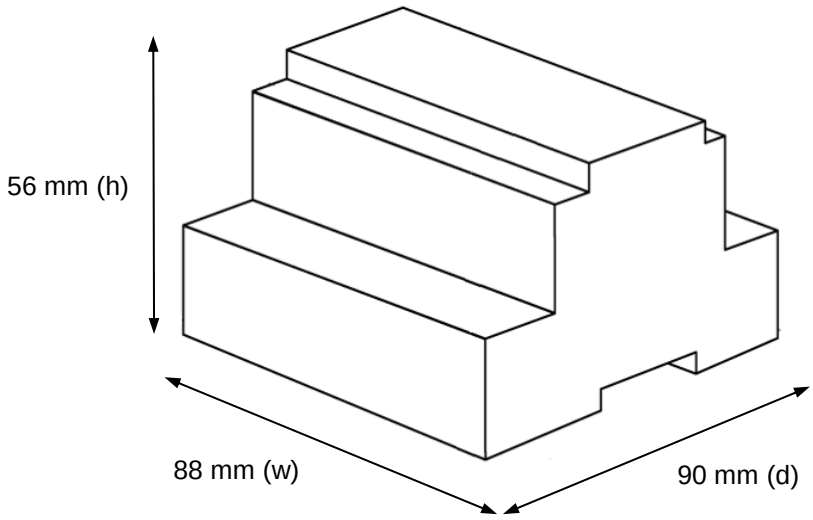
9 Electrical & Mechanical Features



Enclosure	Plastic, type PC (UL 94 V-0) Net dimensions (dxwxh): 90x88x56 mm Recommended space for installation (dxwxh): 130x100x100mm Color: Light Grey. RAL 7035
Mounting	Wall. DIN rail EN60715 TH35.
Terminal Wiring (for power supply and low-voltage signals)	Per terminal: solid wires or stranded wires (twisted or with ferrule) 1 core: 0.5mm^2… 2.5mm^2 2 cores: 0.5mm^2… 1.5mm^2 3 cores: not permitted
Power	1 x Plug-in screw terminal block (3 poles) 9 to 36VDC +/-10%, Max.: 140mA. 24VAC +/-10% 50-60Hz, Max.: 127mA Recommended: 24VDC
Ethernet	1 x Ethernet 10/100 Mbps RJ45 2 x Ethernet LED: port link and activity
Port A	1 x Serial EIA485 Plug-in screw terminal block (2 poles) A, B 1 x Plug-in screw terminal block green (2 poles) SGND (Reference ground or shield) 1500VDC isolation from others ports
Switch A (SWA)	1 x DIP-Switch for serial EIA485 configuration: Position 1: **ON:** 120 Ω termination active **Off:** 120 Ω termination inactive Position 2-3: **ON:** Polarization active **Off:** Polarization inactive
PORT B	1 x Serial EIA232 (SUB-D9 male connector) Pinout from a DTE device 1500VDC isolation from other ports (except PORT B: EIA485) 1 x Serial EIA485 Plug-in screw terminal block (3 poles) A, B, SGND (Reference ground or shield) 1500VDC isolation from other ports (except PORT B: EIA232)
Switch B SWB)	1 x DIP-Switch for serial EIA485 configuration: Position 1: **ON:** 120 Ω termination active **Off:** 120 Ω termination inactive Position 2-3: **ON:** Polarization active **Off:** Polarization inactive

Battery	Size: Coin 20mm x 3.2mm Capacity: 3V / 225mAh Type: Manganese Dioxide Lithium
Console Port	Mini Type-B USB 2.0 compliant 1500VDC isolation
USB port	Type-A USB 2.0 compliant Only for USB flash storage device *(USB pen drive)* Power consumption limited to 150mA *(HDD connection not allowed)*
Push Button	Button A: Check the user manual Button B: Check the user manual
Operation Temperature	0°C to +60°C
Operational Humidity	5 to 95%, no condensation
Protection	IP20 (IEC60529)
LED Indicators	10 x On board LED indicators 1 x Error LED 1 x Power LED 2 x Ethernet Link/Speed 2 x Port A TX/RX 2 x Port B TX/RX 1 x Button A indicator 1 x Button B indicator

10 Dimensions



Recommended available space for its installation into a cabinet (wall or DIN rail mounting), with space enough for external connections
